Maximum demand.	Highest average demand measured in kVA at the point of supply during a 30-minute integrating period in a billing month.		
MD (TOU)	For TOU tariffs this only applies during the Peak and Standard periods.		
NMD	Maximum demand notified by the customer and accepted by the municipality per point of supply applicable for all hours of the day. (KVA)		
Access Demand	Highest of the NMD, installed capacity or Highest Maximum demand during the previous 12 months.		
High voltage (HV)	Networks at a voltage greater than 22kV.		
Medium voltage (MV)	Networks above 1 kV up to 22 kV.		
Low voltage (LV)	Networks less than 1 kV (<1000 V). Single phase 230 V, 3 phase 400 V.		
Basic charge.	Monthly fixed charge payable per point of supply to recover customer services costs such as meter reading, billing and service connection and meter capital. (R/m)		
Capacity charge	Fixed network charge to recover network costs based on the installed / limited capacity. (R/Amp/m)		
Access charge	Fixed network charge to recover mainly dedicated network costs based on the Access Demand. (R/kVA/m)		
Demand charge	Variable network charge to recover the mainly shared network costs based on the chargeable demand.		
Energy charge.	Charge for each unit of active energy consumed during the billing month (R/kWh)		
Reactive energy charge.	Charge based on the reactive energy supplied in excess of 30% (0,96 power factor or less) of the kWh recorded during the peak and standard periods. The excess reactive energy is determined per 30-minute integrating period and accumulated for the month applicable during both seasons. (R/kvarh)		
Basic, Capacity and Access charges.	Fixed charges as prescribed, is levied in respect of every separate electricity connection or erf. If two or more buildings or structures on the same erf are supplied with electricity from only one meter connection, the registered owner of such property will be held liable for the payment of the prescribed charges.

BULK CUSTOMER TARIFFS							
These tariffs are applicable to all customers who's installed capacity exceeds 50 kVA. This is irrespective of whether it is a commercial, industrial, domestic or municipal type connection. The energy charges are based on the TOU and thus applies to all types of load profiles. The structure is very similar to that of the Eskom Megaflex tariff and thus gives the true cost signals through to customers to be able to respond thus reducing their own and the municipal costs.							
7.1.1	Bulk: Time of use Tariff. Medium Voltage (11 000 kV)						
This tariff is where the supply is given at 11 kV. The transformer and associated LV equipment belong to the customer who is responsible to operate this in close co-operation with the municipality. The customer is also responsible for maintenance and replacement of this equipment. In cases of absence of a VT/CT unit, the measurement can be done at LV but in this case a surcharge of 1.5% should be applied to the Maximum demand, Access and Energy charges.

SMALL CUSTOMER TARIFFS (< 100 kVA)							
These tariffs are for small customers < 100 kVA. These customers will not be subject to monthly maximum demand charges. They will however be subject to Basic and Capacity charges if capacity exceeds 20 Amp 1 phase. All new customers will be on pre-payment. The basic and capacity charges will be levied via the standard municipal billing system and be billed to the registered owner of the property. Purchases of pre-payment units will be blocked in case where the fixed charges are in arrears. Capacity will be available from 30 to 60 Amp in 10 Amp blocks. Customers need to apply to change their capacity. For pre-payment customers this will be done by generating an engineering token. Conventional customers need to apply for pre-payment to change their capacity.							
CAPACITY LIMITS							
All small customers tariffs are now associated with capacity limits. Customers thus need to manage their electricity demand so as not to trip the circuit breaker. If the breaker in the pre-payment meter / distribution board trips, they need to first reduce the demand by switching off some electricity intensive appliances and then resetting the breaker in the pre-payment meter / distribution board after the set time delay. Only if the supply trips outside at the municipal supply point should the municipality be called. Call outs when the pre-payment meter / distribution board breaker trips due to overloading could lead to a call out fee being charged to the customer. Customer who illegally increase their own circuit breaker capacity could lead to tripping of the municipal breaker and would result in a penalty charge being levied.							
Commercial Small customer tariffs (<100 kVA)							
Commercial customers include, but are not limited to, shops, offices, halls, schools, sports clubs, restaurants, theatres, consulting room establishments and all other commercial types.							
7.1.3	Commercial (previously Two Part Tariff) (Pre Paid or Conventional meter)

7.2.5	Geyser control exclusion:						
The municipality applies a system of remote geyser control to reduce its network and Eskom peaks thus reducing costs. This is done in a way to maximise cost reduction but still allowing ample time for geysers to heat up. The benefit is passed onto customers. This tariff applies to those customers not wanting the municipal geyser control due to possible inconvenience or where the relays are found to have been bypassed or tampered with. This charge will be levied per geyser not controlled in addition to any other tariff charges.

7.2.6	Small customer: Time of use Tariff. Low Voltage (Less than 50 kVA, 400/230V)						
This tariff is for any small customer with installed capacity of less than 50 kVA who either want to be supplied on TOU but it is compulsory for any small customer who wants to install renewable energy at its premises. This includes PV, wind or any other renewable energy source. These customers will have to apply and pay cash up front to cover the cost of a 4 quadrant smart meter that can measure forward and revers power flows and customers need to sign new power supply agreements. The reason for this is that the renewable power source will distort the normal usage pattern and thus the standard tariff does not apply. The meter also provides for the customer to feed surplus power into the network.

7.3	SMALL-SCALE EMBEDDED GENERATION (SSEG)						
This tariff is for customers who want to sell surplus renewable power to the municipality. This is subject to various conditions including the customer being on TOU and signing a new supply agreement. These amounts will be credited to the customers energy component of the bill and not beyond extinction in any month. ??????????. The basic charge is in addition to any standard tariff charges.

The tariff contains a basic charge which applies for each luminaire and is to cover the cost of operations and maintenance on the streetlight circuit and luminaire. The energy charge is to cover the cost of energy and networks up to the streetlight circuit. The amount of energy can be determined by calculation, lamp capacity plus losses times hours of burning or by means of meters per point of supply to the lighting circuits. For any other municipal purposes: -Standard tariffs apply for all other Bulk, Domestic and Commercial applications.
